To get started, touch anywhere on the screen.

If you’re going to use the projector, select **Video** from the screen. Video is the first icon (on the left) in the bottom row.

The projector screen will automatically release.
We will start with Apple TV. Tap **Apple TV** to select it. Apple TV is the first icon on the left side of the screen.

Make sure your iPad is connected to WiFi. Swipe upwards from the bottom of your iPad screen to access its control center. Tap **AirPlay** at the bottom of the screen.

You’ll see a list of rooms appear. Select the room you’re in, then tap the slider into the green on-position. You may be prompted to enter a four digit passcode for AirPlay, that will automatically pop-up. Don’t forget to mirror-off when you’re done.
To project your PC on the screen, tap **Local PC**. Then on your PC, login using your LYNN credentials.

To ensure the lighting is good for your audience while the projector is on, tap the **Lightbulb** icon on the right outer panel of the monitor. Then, select **Preset 2**, to turn off the lights directly in front of the projector. Now that you've adjusted the lighting for your audience, you can also adjust the volume from this window. When finished screening, tap **All On**, to bring all of the lights back on in the room.

You can always tap the **Home** icon on the right outer panel of the monitor, to get back to your Home Screen. Tapping the **Intercom** icon will allow you to call Security or the Help Desk.
When you’re all done, make sure you turn the power off. The projector light bulbs are costly, and we want to maximize their lifespan. Before you leave, tap the **Power** button on the right outer panel of the monitor.

Tap **Yes** to turn the power off.

Thank you, and the best of luck in your classes!
